

WORLDPAY

leading global provider of payments technology

Atlanta, GA
133,000 SF

Relocate Worldpay's US headquarters from Class B to Class A office space at Atlantic Station with the intention of adding 600 jobs over the coming years.

Challenges:

- Create a dynamic space that attracts millennials and software engineering talent while increasing operational efficiencies by aligning departmental adjacencies and allowing for growth.
- Provide a design aesthetic and amenities that create transparency, equality and support for all employment levels and positions within the company.
- Relocate 671 employees from one building to another without sacrificing productivity and growth.

Creative Solutions:

- Created a variety of collaborative and semi-private spaces at the building core maximizing the natural light from the building's full-glass envelope and showcasing the 360-degree views of Atlanta.
- Designed flexible, strategic growth areas to respond to future changes without disrupting departmental adjacencies.
- Utilized open benching systems for all employees including executives. Break rooms, conference rooms and meeting spaces designed with similar aesthetics and location on each floor created a cohesive top to bottom company structure.
- Implemented a two-floor/three-phase project schedule with a staggered move sequence that enabled a successful transition without work flow disruption.

Services Provided:

- programming
- space planning
- visioning sessions and renderings
- construction documents
- FFE
- consultant coordination (MEP, structural engineers, security, AV, IT)
- construction administration
- project management

Completion:

2017
